DESCRIBE THE PRESENT AND ORIGINAL (if known) PHYSICAL APPEARANCE			

The building is three bays wide on Calvert Street and one bay wide on Preston Street. The Calvert Street facade building walls are laid in running bond, and the foundation walls are of rusticated granite. On Preston Street, the building and foundation walls are laid in rusticated granite. The building is 3½ stories high with a high pitched shingled. A granite chimney to the right of the Preston Street facade projects above the roof.

Calvert Street Facade:

From the left, the first of the three bays is punctuated by a full arched double hung window with one-over-one lights, rusticated full arched stone lintel and a stone sill. This window punctuates the first story facade. The upper story facades in this bay are unfenestrated.

The center bay first story facade is punctuated by a flat entrance surmounted by a full arch transom. Two full arched double hung windows with stone sills flank either side of the entrance. A continuous rusticated lintel of three full arches, the center one being the largest, surmounts the windows and entrance. The entrance surmounts six stone steps and one stone stoop. The sixth step forms a small porch. There is a wrought iron railing surrounding the porch that offers support up the short flight of steps. The second story facade of this bay is punctuated by four full arched double hung windows with two over two lights, full arched brick lintels and stone sills. The third story facade of the center bay is punctuated by four narrower full arched double hung windows with full arched brick lintels and stone sills. This part of the facade wall, housing these windows initiates a dormer that rests on this section of wall and progresses up to the roof to a truncated turret that houses a small jalousie window. The fenestration in this central bay is symmetrically organized.

The next bay follows the same pattern of organization through each story facade. The bay is a bay windows with three flat double hung windows of two-over-two lights, with brick lintels and stone sills. The third story facade has a dormer effect by way of its projecting beyond the roofline and being topped by a five sided roof.

The Preston Street facade fenestration is symmetrically organized. The bow window constitutes the bulk of the first and second story facades. It is comprised of three flat double hung windows of one-over-one lights, with stone sills and lintels. The bow window is crowned by a painted wood cornice. The third story facade does not project, thereby leaving the space atop the window on a porch with a wrought iron railing. The facade wall is punctuated by two flat double hung windows of one-over-one lights. Both windows are surmounted by a flat single light transom, and both have stone lintels. A semi-circular roof projects over the porch in imitation of its shape.
